

RAY(LEI) ZHANG

(+86)131-6237-9005 ◇ portgasray@gmail.com

EDUCATION

Fudan University, Shanghai, China

D.Eng in Electronics and Information

2018 - Present

GPA(overall):3.5/4

University of Shanghai for Science and Technology, China

MA in Computer Technology

2015 - 2018

Jiangsu University, China

B.S in Software Engineering

2011 - 2015

SKILLS

Software: Python, Matlab, C++, Java, Linux, ROS, OpenCV, Git

EXPERIENCE

An Indoor Localization Application in Emerson Factory

Project Officer, University of Shanghai for Science and Technology

Developed a GUI with map function that could display the position in real-time. In terms of hardware, integrated a GPS module to the WirelessHART node.

Developed an algorithm to analyze the collected data, meanwhile integrated OPC module communication with the gateway.

Data Monitoring Platform for Wine Industry

Project Assistant, University of Shanghai for Science and Technology

Worked at a team of three to develop a B/S platform, database, and algorithm for over 200 winery users and government officers, optimized SQL storage structure for limited searching time, automatically generate the production and sales reports by region, season, month or year and display it to the local officers.

Grasping Novel Objects Using in Unstructured Scenarios (Progressing)

Project Officer, Fudan University

Currently, finished the calibration with a robot arm and the RGB-D sensor. Tracking different wooden blocks using OpenCV as the first step.

For further study, developed a vision algorithm based on point cloud that generates 6-DoF grasp hypotheses, and used a deep-learning approach to get the optimum grasp pose.

WORK EXPERIENCE

Roaddefend, Shanghai

Algorithm Engineer Intern

2019 - 2019

- Worked with the project leader to implement a face recognition algorithm on DMS(driver monitoring system) device, including data clean, model training and algorithm evaluation.

Kyligence, Shanghai

Data Engineer Intern

2017 - 2018

- Worked at a team of Development and Operations for Kylin(An online language analysis platform) on building an automation platform at AWS and Azure for log analysis.

AwiaTech China, Shanghai

2015 - 2017

Software Engineering Intern

- Replicated a host application for monitoring WirelessHART devices with Java Swing technology.
- A customized host application that implements WirelessHart host communication with PLC device based on observer pattern.
- Lead a project that cooperated with China Petroleum to upgrade its field instruments to support the WirelessHART protocol. Meanwhile, I developed an IoT monitoring system to predict the status of devices and alert prior to the error.

SELECTED HONORS

2019 Second Class Scholarship(2nd place in marjor)

2017 Second Prize of International Innovation and Entrepreneurship Competition in Shanxi

2016 Second Prize of Industrial Internet of Things Competition in Yinchuan

ACTIVITIES:

Team honor - 1st place in the group of the First Kendo Competition of Universities in Shanghai

Java Design Pattern certification by IThub(a training institution)
